Grid + Angles

lines & angles? should we rotate the canvas to draw things? (NO!)

```
// in drawGrid(...)
val r = 50f
val endX = ??????
val endY = ??????
+drawLine(
-drawCircle(
    start = Offset(startX, startY),
    end = Offset(endX, endY),
    strokeWidth = 5f,
    color = Color.DarkGray
```

Polar Coords!

 θ = radians radian = degree * $\pi/180^{\circ}$
